The multi-functional Home Dryer
for year round use

OASIS

Moisture and Condensation Control

Energy efficient laundry drying
all year round

Spot Cooling ideal for humid
summer days

Takes the chill off cold winter air

Advanced air filtration

Unique clothing deodoriser

Introducing the Oasis Eco Dryer

The latest addition to the highly successful range of Mitsubishi Oasis Dehumidifiers is the new advanced **ECO DRYER**. This model features powerful energy efficient laundry drying, a newly developed "Spot Cooling" dual cool/warm air flow function ideal for humid summer days, advanced air filtration ideal for allergy and asthma sufferers and a unique laundry deodorising function that effectively removes smoke and cooking smells from clothing items.

These unique features, plus its 3 effective dehumidifying modes and 3 directional air flow presets, make the MJ-E15BX **ECO DRYER** ideal for year round moisture management.

Spot Cooling Mode - Ideal for humid summer days

Dual cool and warm air flow allows the Mitsubishi Oasis Eco Dryer to be used year round, not just when you have condensation issues typical in winter months. This function is perfect for warm summer months as it **directs oscillating cool air** to a specific area in a room.

The system is able to isolate both cool and warm air from each other. The warm air is then sent out from the back of the unit giving the feeling of a cool breeze in the opposite direction selected. This function is also perfect for directional spot cooling of bathrooms after a shower or when you are cooking in the kitchen.

Take the chill off cold winter air

In wintertime, the new Oasis Eco Dryer is more effective than a standard dehumidifier at taking the chill off the air in a room. The key to this are its two air vents that can be positioned in 3 different directional combinations allowing both cool and warm air to blow out of the dehumidifier simultaneously through its own separate movable ducts. This allows the option of two air temperatures to be distributed through the top vents.

Unique Deodoriser Mode

The quick "Pick-me-up" for delicate clothing, suits, or any other items that are normally only laundered. The unique **Deodoriser Mode** freshens single items within one hour, removing odours such as smoke and cooking smells effectively.

Powerful energy efficient laundry drying year round

The Eco Dryer is specifically designed to dry different types of laundry. The **Heavy** or **Standard Mode** can be selected depending on the thickness and amount of clothes to be dried.

The warm “intelligently controlled air” dries clothes effectively in the shortest period of time. An **Auto Sensor** monitors the indoor temperature/humidity and instinctively shuts down when the clothes are dry, saving you money on your power bill.

Why use a power hungry tumble dryer to dry clothes when you can dehumidify a room and dry your laundry effectively at the same time!

Kinder on your clothing, your wallet... and the environment

Get the benefit of dehumidifying a room and drying laundry at the same time.

The Oasis Eco Dryer is designed specifically to dry clothing items, quickly, efficiently and ever so gently. Compare the cost of a tumble dryer with the multifunctional Oasis Eco Dryer.

DRYING METHOD	Standard Tumble Dryer*	Oasis Eco Dryer**
Washing Load	3.5kg wet	2.85kg wet
Power Consumption	0.77kW/h	0.29kW/h
Cost to dry indicated load	\$0.56	\$0.09
Approximate drying time	220 min	90 min
Ability to dry delicate items such as silk and wool	no	yes
Ability to dehumidify a room at the same time	no	yes
Estimated cost based on 52 loads, over a 12 month period. *	\$29.12	\$4.68

* Based on the cheapest 3.5kg capacity vented tumble dryer identified by www.energyrating.gov.au

** Dehumidifier drying time estimate based on a room temperature of 20°C, a humidity level of 70% and a 9.7m² room. Actual figures may vary, dependant on room size, ambient conditions and size of washing load.

Swing louvre directional air flow

Three presets offer maximum flexibility in directing the airflow to where it is really needed. **Front Flow** is ideal for drying out damp closets. **Upward Flow** is perfect for drying laundry and the swinging **Wide Flow** is most effective when wanting to dehumidify an entire room or area.

Mildew Guard Elite

Asthma and allergy sufferers will also appreciate the built in **Mildew Guard Elite** function that when activated will ensure the internal components are dry to inhibit mould growth that could otherwise be circulated back into the air.

Advanced air filtration ideal for asthma and allergy sufferers

The **Silver Ion Sterilizing and Deodorising Filter** supplied with the Eco Dryer is effective in combating common household allergens and provides additional anti-bacterial and anti-viral properties for truly advanced air filtration. This makes the Eco Dryer ideal for Asthma and allergy sufferers.

Guaranteed performance down to 1 °C!

Hot Gas Defrost means the Oasis Eco Dryer can **operate down to 1 °C** and that's when you really need it to work! Unlike some other brands, the Oasis Eco Dryer does not use a built in electrical heater to achieve this, which means it's cheaper to run. Combined with the low temperature mode, the Oasis Eco Dryer is even more efficient at low temperatures.

Economical dehumidifying to combat moisture

The Mitsubishi Oasis Eco Dryer features 3 dehumidifying modes; **High Fan Speed**, **Low Fan Speed** and an **Auto Mode**. The Auto mode is an energy saving function that automatically switches the dehumidifier on when the humidity level in the room is too high.

High moisture removal

The new Oasis Eco Dryer boasts a moisture removal capacity of **15L per day** (30 °C, 80% RH) and will help to keep your home free of excessive dampness without compromising on noise, weight and ease of use. As soon as the optimum humidity level for the current temperature and room size is reached the dehumidifier reverts to **Standby Mode**, constantly monitoring the humidity levels and turning on and off as required.

Quiet and light

Mitsubishi's Rotary Compressors are super efficient, effectively removing excess moisture without compromising on sound. The Eco Dryer has a sound rating of only 39dBA in Low Fan Speed.

COMPARE OUR FEATURES:	✓	MJ-E15BX
MOISTURE REMOVAL CAPACITY Moisture removal is normally measured in litres removed per day, at a stated temperature (°C) and a relative humidity (RH) in %. The standard measure is litres per day at 30°C and 80% RH. Look for a dehumidifier that has a reasonably high moisture removal capacity (we recommend 15L per day +). Note that the higher the temperature in a home, the better the moisture removal capacity. At lower temperatures, it is essential to have a dehumidifier with good low temperature performance.		15.0L per day (30°C, 80% RH)
WATER COLLECTION TANK CAPACITY		2.5L approx.
LOW TEMPERATURE PERFORMANCE Low temperature performance is an important consideration for most New Zealand dehumidifier users. Look for a product that has a Hot Gas Defrost System. This enables the dehumidifier to continue working down to very low temperatures (around freezing point). Some products available do not have this feature or require expensive heaters to engage at lower temperatures, resulting in heavy and expensive to run dehumidifiers.		Hot Gas Defrost Low temperature performance down to 1 degree
SOUND LEVELS All dehumidifiers will make some noise, due to compressors and fans running. This is similar to a refrigerator. Generally, the larger the compressor, the higher the sound level. For most people, the relationship between sound levels and performance can be something of a trade-off. When comparing sound levels, note that a difference of 6dBA (decibels) is approximately 100% louder as heard by the human ear (i.e. 41dBA is approximately twice as loud as 35dBA). NB: Our research shows that the lower sound level of the Mitsubishi Oasis whilst maintaining High Water Removal is one of the key purchase factors when customers select our products.		39dBA (low operation speed) 49 dBA (Dehumidifying HIGH Mode)
AIR PURIFIER/FILTER The OASIS ECO DRYER MJ-E15BX Silver Ion Filter is designed for sterilizing and deodorising common household allergens, healthier air. Its advanced air purifying filtration efficiency will truly reduce dust, pollens, smoke, allergens and provides anti-bacterial and anti-viral properties. Given New Zealand's high level of asthma and allergies, these options are worthy of careful consideration. Code: MJPR-10AXFT.		Yes Silver Ion Anti Bacterial Filter Long Life Washable
MILDEW GUARD ELITE - INTERNAL DRYING MODE		Yes
LAUNDRY DRYING MODE WITH 12 HOUR TIMER		Yes 3 Powerful Modes: Heavy / Normal / High
CLOTHING DEODORISER This unique laundry mode freshens any type of clothes within one hour, removing odours such as smoke and cooking smells effectively.		Yes
MULTI DIRECTIONAL AIRFLOW SWING LOUVRE		3 Directions: Wide / Upward / Front
HUMIDITY INDICATOR		Yes Automatic
AUTOMATIC ONE TOUCH EASY DEHUMIDIFYING		Yes
SPOT DIRECTIONAL AIRFLOW FUNCTION		Warm / Variable Cool / Low Cool
TIMER		2 – 4 - 8 hours On / Off Timer
CHILD LOCK		Yes
DRIVE MODE		8 Modes: Auto / High / Low / Mildew Guard / Easy Dehumidifying / Laundry Mode / Spot Directional Air Flow / Clothes Deodoriser
WEIGHT/PORTABILITY Weight and portability are also important for many users. When you consider that some dehumidifiers weigh in excess of 20kg, a light, portable unit (preferably with castors) is recommended, particularly for multi-level homes.		14kg 4 x Castors
PERMANENT HOSE Permanently attached dehumidifiers are useful in protecting areas that are frequently shut up. Boats, Caravans and Holiday Homes can build up large amounts of moisture. A permanent hose attachment means you can run your dehumidifier constantly in this situation.		Yes
ENERGY USAGE ON CONTINUOUS RUNNING		0.29 kW/hr

Warranty: 12 months comprehensive parts and labour warranty. Does not apply to faults caused by salt or sulphur corrosion. Any major fault outside the 1-year warranty will be a discretionary call as to repair or replacement.
