LOSSNAYPrO LGH-RVS

The LossnayPro LGH-RVS-E Sensible Heat Recovery Ventilation Range is designed to simultaneously extract stale air from commercial spaces and supply fresh filtered air. With the added benefit of recovering valuable heat energy for maximum efficiency.

Lossnay pro

LGH-50RVS-E 139 L/s of air LGH-80RVS-E 222 L/s of air LGH-100RVS-E 278 L/s of air

Key Features

The Ultimate Heat Recovery Ventilation System – Made for all Areas

The sensible heat recovery addition to the Lossnay range introduces fresh filtered air and with the non-permeable and washable Lossnay Core, it also draws stale air out from areas with high humidity such as bathrooms, kitchens and laundries as well as commercial applications such as gyms, healthcare centres, schools and offices.

The LGH-RVS Series uses the residual heat from the outgoing stale air to pre-condition the incoming fresh air, which allows buildings to maximise efficiencies whilst maintaining healthy levels of fresh air and keeping CO_2 levels low.

Low Noise Operation and Increased Energy Efficiency

Starting from a super quiet 18dB(A)*, the LGH-RVS Series operates with incredibly low noise thanks to a specialised sirocco fan produced by Mitsubishi Electric. This unique fan balances airflow and static pressure to minimise noise levels. The series also incorporates a high-efficiency motor to reduce power consumption.

Optional silencer ducts can reduce noise further when a quiet solution is paramount.

Combine Lossnay with Mr Slim Ducted Systems

LGH-RVS can be integrated with a Mitsubishi Electric Ducted Air Conditioning System. The ducted system provides heating and cooling while the Lossnay ventilator brings in fresh air into the building while expelling the stale air at the same time.

The heat recovery ventilators help to reduce the load on the ducted air conditioning system.

Easy Installation and Drain Piping

The light chassis of the LGH-RVS Series can provide an advantage in terms of cost and safety of installation.

The unit features one drain pipe terminal for both supply air (SA) and exhaust air (EA). A condensate trap is not required as the LGH-RVS unit features an internal backflow prevention device and an inclined drain pain, which not only helps with installation, but also reduces the risk of mould and odour.

Optional CO₂ Monitoring

With the option of an additional CO_2 sensor. When connected with the optional Wi-Fi Control Interface, CO_2 levels can be viewed in real-time making it ideal for schools, medical facilities and offices.

It is well known that poor air quality impacts health, wellbeing and concentration levels. In conjunction with the CO₂ sensor, the Lossnay LGH-RVS system intuitively adjusts airflow to ensure optimum air quality, no matter how many people are in the room.

Make Heat Recovery Ventilation Visible – with Optional Lossnay Wi-Fi Control

Elevating air quality and maximising energy efficiencies has never been easier, because now the power is in your hands.

See by how many degrees Lossnay is pre-warming or pre-cooling the incoming fresh air to the building in real time, helping save on operating costs because less additional heating is required to get a room up to temperature.

And in summer, monitor by how many degrees Lossnay reduces the average temperature using Automatic Free Cooling[†] Mode.

In addition, the App will also proactively remind you when it is time to clean filters to maximise both cost efficient operation and health benefits.

Lossnay Wi-Fi Control truly is the smart evolution in fresh air ventilation.

With the option of an additional CO_2 sensor, when connected with the optional Wi-Fi Control Interface, CO_2 levels can be viewed in real-time making it ideal for schools, medical facilities and offices.

PZ-70CSW-E (Wall Mounted Type) C02 levels are indicated by LED lights

† In comparison to using a dedicated cooling device. The unit will continue to use a small amount of power to bring colder fresh air from outside.

Specifications

LGH-RVS-E – Commercial Series

| | Model | LGH-50RVS-E | LGH-50RVS-E LGH-80RVS-E LGH-100RVS-E | | | |
|---------------------------------|---------------------------------|--------------|--------------------------------------|------------------|-------------------|--|

| LGH-100 RVS-E | Requires | 2 | 1* | 1* | |

* Optional filters when installed will replace Standard filters.

** Optional filter upgrades should be installed exclusively in the Supply Air (SA) or Outdoor Air (OA) streams, while standard filters should be maintained in the Return Air (RA) stream. Please refer to the Installation Manual on Techview for more details.

Please note: When deciding on the best place to position the Lossnay Ventilation System, care needs to be taken to not have incoming air intake near or close to a wood burner flue.
